A full-page photograph of a warehouse interior. In the foreground, a man in a grey shirt and jeans is operating a red and black Toyota Class 2 electric forklift. The forklift is positioned in a narrow aisle between tall metal shelving units. The shelves are filled with numerous cardboard boxes, stacked high. The forklift's mast is extended upwards, reaching towards the top of the shelving unit. The operator is seen from the side, looking up at the boxes. The lighting is dramatic, with strong highlights and deep shadows, emphasizing the height of the warehouse and the compact nature of the forklift. The text 'THE ELECTRIC FORKLIFTS DESIGNED TO GET YOU AROUND TIGHT CORNERS AND KEEP YOU OUT OF TIGHT SPOTS.' is overlaid on the left side of the image in white and orange. A dashed line separates the headline from the body text.

THE ELECTRIC FORKLIFTS DESIGNED TO GET YOU AROUND TIGHT CORNERS AND KEEP YOU OUT OF TIGHT SPOTS.

Distribution centers. Warehouses. Food storage. Manufacturing facilities. Wherever space is limited or there are narrow aisles to navigate, Toyota's Class 2 electric forklifts are the solution.

They're specially designed to provide better maneuverability and operation in tight quarters, without sacrificing travel speed or lift and lower speeds.

Their nimble profile and features make them ideal for fulfillment center operators who need to maximize productivity by moving pallets of merchandise to and from shelves as quickly and efficiently as possible. Hour after hour, day after day.

And because our electric forklifts have fewer moving parts, they're less susceptible to wear and tear, easier to maintain, and less expensive to operate. That's Toyota. And that all adds up to the one advantage you'll appreciate regardless of your environment: more uptime.

OUR MACHINES CARRY SOMETHING NO OTHERS CAN: THE TOYOTA NAME.

As one of the most recognized and respected brands in the world, the Toyota nameplate is synonymous with quality, durability, and value. It also provides a sense of confidence that few companies of any kind can match.

Every forklift that rolls out of our state-of-the-art Columbus, Indiana, plant is a product of the legendary Toyota Production System — which features Just-in-Time parts delivery and quality checks at every step of the manufacturing process. And because TPS focuses

on the complete elimination of waste in manufacturing, we deliver every forklift right when it's needed.

It's all part of the Toyota philosophy of “kaizen”: the dedication to continuous improvement. Instituted by our founder more than 80 years ago, it's a principle that still guides us today.

And as long as our forklifts carry the Toyota name, we'll continue striving to improve processes and quality.
