

HIGH-CAPACITY ORDER PICKER

EFFICIENCY AND PRODUCTIVITY: ELEVATED

High throughput warehouses, such as those commonly found in eCommerce, require detailed space planning and cube optimization to meet rising customer demands. Increased inventory and SKUs combined with a finite footprint requires your warehouse to be flexible while fully utilizing its vertical space.

With market-leading lift heights up to 456" and optimized capacity retention, Toyota's High-Capacity Order Picker meets the perfect balance of performance and versatility you need. The added lift height enables access to an additional rack of storage throughout your facility.

Available Toyota approved lithium-ion batteries offer reliable performance and long-lasting runtimes to maximize your productivity and efficiency.

WAREHOUSE OPTIMIZATION: WITHIN REACH

Improve your operation with realizable storage improvements, including:

- ▶ 17% reach increase – 1 complete rack higher
- ▶ Access to 11% more pick slots for additional SKUs
